

FINAL NOTICE - BLOCK REWARD DIVERSION INVESTIGATION

To NiceHash Compliance and Legal Teams,

This is a final notice.

I am in possession of irrefutable forensic evidence proving systematic misattribution and diversion of block rewards, marked by the identifier 'z>mm', which appears in thousands of Bitcoin blocks mined through your infrastructure during periods of inactive rental.

These blocks also carry spoofed coinbase tags representing major mining pools including Antpool, Foundry, and ViaBTC — all of which were falsely branded to conceal the true mining origin. The pattern is not only clear — it is timestamped, repeated, and logged in full.

I now consider your silence a deliberate act of obstruction.

You have exactly 1 hour to acknowledge this message and confirm willingness to resolve the matter.

Failure to do so will result in:

- Immediate disclosure to affected mining pools;
- Full evidence package submitted to EU regulators, the SEC, FinCEN, OLAF, and global blockchain forensics firms;
- A formal public release via GitHub and multiple media entities currently on standby.

This is your final opportunity to engage with integrity.

After this hour, I am under no further obligation to protect your position — and I will not.
